A consult request is a request related to a patient, when the requesting provider (*e.g.*, a physician or nurse practitioner) could benefit from consulting with a specialist to enhance the care pathway.

The requesting provider selects whether to submit their request to a specific specialist (or specialty group/program) or to a regional (where available) or a provincial managed specialty group (*i.e.*, a BASE Managed Specialty Group*****). The request includes patient information, a detailed description of the request, and any available attachments.

When requesting a consult, you can:

*   Save it as a draft (to create a draft copy and return to it later) or
*   Delete the draft (discard and nothing is saved) or
*   Send the request to the selected specialist/group/program or BASE Managed Specialty Group.

You can create an eConsult request from several places within OTNhub.

Figure 1:   Options for creating an eConsult request

*   A group of specialists responding to eConsult cases for a given specialty or sub-specialty (*e.g.*, pediatric cardiology) within a specific region of Ontario.

** If the eConsult button appears grey, the specialist has set out-of-office dates. You cannot send them a consult request.

For technical issues, contact OH-OTN Technical Support at **1-855-654-0888 or techsupport@otn.ca**

For Ontario eConsult Program information, contact **eConsultCOE@toh.ca**

Providing Request Details

The request details include information about the requesting provider, the target specialist or group, and the patient.

1. The **Requester** field is automatically populated with your name. (That is, the name of the person currently logged into the eConsult application.)

   • If you are a **delegate** acting on behalf of a requester, select the desired requester.

   • To view more information about the requesting provider, click the **Requester** name. (If the requestor has an OTNhub Directory profile, their profile page opens. If they don't have a Directory profile, their address and billing information appear under their name.)

2. Identify the eConsult model used for your request.

   • To submit your request directly to a specific consultant or group, select **Specific Provider or Group** and skip to step #4.

   • To submit to a regional (where available) or a provincial managed specialty group, select **BASE Managed Specialty**.

   • You can change the selected model up until you click the Submit button.

3. If you selected a **BASE Managed Specialty Group**:

   a) If this is the first time you are creating a request, you are prompted to set your Priority Region. See Appendix: Setting your Priority Region on page 9.

   b) Select a **Specialty** category and its subspecialty option.

      » The subspecialty drop-down list appears only if the category has options associated with it.

      » The Specialty and subspecialty field contents depend on your Priority Regions. If you have not identified any priority regions, the fields' contents are based on the provincial managed groups available for your area.

   c) eConsult automatically selects the **Region** based on the Specialty you selected and the Priority Regions identified in your eConsult Settings.

      » If you have more than one Priority Region, to change the automatically selected region, click the **Change** link beside the Region name and select from the drop-down list.

   d) Skip to step #5 on page 4.

Figure 2: Create request form - specific provider

Figure 3: Create request form - BASE Managed Specialty Group

4. If you selected **Specific Provider or Group**:

If you opened the new case from the OTNhub Directory, the **Recipient** field is pre-populated.

If you opened the new case from within eConsult, you need to search for and select a specialist/group.

i. To begin searching for a specialist/group, type at least two characters in the **Recipient** field.

» As you type, the system displays a list of possible matching specialists (their name, specialty, city, LHIN) and groups (name and organization).

» The search results include only specialists/groups that are registered for eConsult and accept eConsult cases.

» To view more details about a specialist/group, move your mouse over the name in the list. (Note: More information appears only if the specialist has added conditions or a description to their Directory profile.)

» If a specialist has set an **out-of-office** notice:

» During the out-of-office period, the specialist's name appears in grey text and you cannot send them a consult request.

» If the out-of-office notice is set for within the next week, the specialist's name is still available and you can assign the case, but you will be asked to confirm that you want to do this.

ii. To select a specialist/group, click the name in the drop-down list.

Figure 4: Specialist more information

Figure 5: Specialist out-of-office notice

Search tips

The search looks for matches *beginning with the first letters* of a field.
For example: If you type **smi**, the search will find names such as **Smi**ley Robinson or Ginger **Smi**th. (It will not find We**smi**ll Aardvark or Joe Black**smi**th.)

The more characters you type, the narrower the search and the smaller the search results list.

eConsult uses the standard OTNhub Directory search (with a filter for eConsult). For more information about this, see Searching via the Directory.

After selecting a specialist/group, you can view more information using the links below their name.

• If there are case or patient eligibility conditions, a linked orange **Note** appears. Click to view the details.

• To view their Directory profile details in a new tab/window, click the **View Directory Profile>>** link.

Figure 6: Specialist links for more information

Continued next page...

5. Type the patient's demographic information in the associated fields (first, middle, and last names, date of birth, gender, OHIP number).

    • All fields are required except the **Middle Name** and **Version code**.

    • If the patient does not have an OHIP number, select the **OHIP Number Not Available** check box.

    • By default, the level of Patient Consent is set to allow full sharing of the patient's PHI.

       If the patient wants to limit the sharing of their PHI, select the check box ☑ **Consent Directives*** and type the patient's request in the associated text field.

6. In the **Request** field, type the clinical question and other relevant information about the case for the specialist.

    • The first sentence is used as the subject in eConsult case lists. Therefore, make this first line descriptive and not too long.

    • Note: there is a maximum limit of 4,000 characters in the Request field. If you have longer notes, use the attachment feature.

7. If you have images or other files you want to include in the consult request, to attach files click the 📎 link at the bottom of the panel.

eConsult automatically saves a draft of the consult request as you add information. However, while providing the details, at any time you can save a draft or delete the draft.

When you have completed the request details, you can submit and send the case to the target specialist/group.

**Figure 7:** Request details - specific provider

Figure 8: Request details - BASE Managed Specialty Group

---

* This is a mandated PHIPA/privacy feature that is part of informed consent from the patient.

Attaching Files

You can attach multiple files to your consult request. For each attachment you should include a brief but meaningful description. Ensure that the recipient has the right software for viewing the attached files.

Notes: (1) The attachment must be a valid file type. eConsult does not accept 'unsafe' file types such as .exe, .vbs, .tmp, etc. For a standard list of unsafe types, refer to the Microsoft Office Outlook support web site.
(2) Maximum file size is 500 MB.
(3) There is no space/storage limit per user or per consult request.

> File attachments with a comma in the name will not open in Google Chrome. For example, eye,xray.pdf

1. If you have image files or other report files to include with the consult request notes, do either of the following:

   - Click the paperclip link at the bottom of the Request Details panel, navigate to the file location and select the desired file.

     Or

   - Using Windows Explorer (or Mac Finder), navigate to the file location, select the file and drag and drop the desired file into the dashed-line square.

   For each file attached, eConsult checks that it is a valid file type, is within size limits and performs a virus scan. (A progress bar appears as these steps are completed.)

2. For each attached file, click in the text field just below the file name and enter a short but meaningful description.

3. To remove a listed file, click the **X** at the far right of the designated file. (For example, if after selecting a file, you realize you made a mistake and want to select a different file.)

   The list of attached files refreshes and reappears without the selected file and a success message briefly appears.

eConsult automatically saves a draft of the consult request as you add file attachments. However, while providing the request details, at any time you can manually save a draft or delete the draft.

When you have completed the request details, you can submit and send the consult request to the specialist.

WMA	Audio
WMV	Video
XLS, XLSX, CSV	Excel Document
XPS	Open XML Paper

Saving or Deleting a Draft

The action buttons for requesting a consult appear at the bottom of the Request Details panel.

Saving a Draft

Saving a draft allows you to navigate elsewhere within eConsult and then complete the consult request later.

eConsult automatically saves a draft of the request as soon as the details include any of the following:

- A selected specialty.
- Any patient field has at least two characters.
- The Request field has at least two characters.
- At least one file is attached.

To manually save a draft of the consult request, click <kbd>Save as Draft</kbd>.

eConsult does the following when a draft is saved (automatically or manually):

- Saves the request details, sets the status to 'Draft' and the request is only available to you (or your delegates).
- Briefly displays a success message.
- The 'Save as Draft' button changes to <kbd>Draft Saved</kbd> until you change or add content.

Figure 11: Draft buttons for consult request

Deleting a Draft

If you change your mind while creating a new request and want to discard the partially completed request or if you have a draft request that was created earlier, you can delete the draft.

1. To start the deletion, click <kbd>Delete Draft</kbd>.

   A confirmation dialog box appears.

2. To confirm and discard, click <kbd>OK</kbd>.

   When you discard, eConsult does the following:
   - Closes the Request Details without saving.
   - Returns you to the eConsult dashboard.
   - Briefly displays a success message.

Sending the Consult Request

After you have completed all the required fields and added all relevant notes and files, you can send the request.

1. **To submit and send the consult request** to the selected specialist/group, click [Send].

   eConsult validates the data you entered. If there is an error, an error message appears, the request is not sent and it remains a draft.

   If there are no errors, eConsult does the following:

   • Saves the request, assigns a Case ID, and the request is available to all parties involved.

   • Closes the request form and briefly displays a success message.

   • Returns you to the eConsult dashboard and the request appears in your Requests List (and in the specialist/group's Case List).

   • Sends an email notification* to the specialist/group.

Figure 12: Send consult request button

2. If you have Automatic update to EMR 🔳 turned on in your **eConsult settings**, eConsult will export a PDF of the case details to HRM only when the case is completed.

   • If you do not have "Automatic update to EMR" turned on:

     » If you have previously selected 🔵 **Export to EMR** for this case, eConsult exports a PDF of the case details to HRM.

     » If you have not previously selected this case for export, to export a PDF of the case details to HRM, click 🔵 **Export to EMR**.

---

* The email recipient might have turned off their eConsult email notifications.

Appendix

Setting Your Priority Regions

Note: If you are a delegate for another user, you cannot set their priority regions. This setting applies only to the person directly logged in to eConsult.

Priority Regions identify specific regions where you can get immediate access to specialty resources.

If you do not select a priority region, or if there is no specialty group in your chosen region(s), cases are answered through the relevant Provincial Managed Specialty Group.

The Priority Regions prompt appears only once. If skipped, you can set these options at any time via the OTNhub Service Settings 🔲 feature.

The first time you select a model of BASE Managed Specialty, eConsult prompts you about Priority Regions.

If you are a requesting provider creating *your own request*, the prompt asks you to set your Priority Regions. Skip to step #1 below.

If you are a delegate creating a request *on behalf of someone else*, the prompt asks you to remind the person for whom you're working to set their priority regions. To return to the eConsult request screen, click "Skip" in the pop-up prompt.

1. To access the Priority Region settings, click `Set Priority Regions` in the Priority Regions pop-up prompt.

    A new browser tab opens with the OTNhub eConsult settings.

2. To identify a region, click the **Select a Priority Region** drop-down arrow and click on a name in this list.

    • The selected region appears below the drop-down field.

    • A default priority is assigned based on the order in which you add them. For example, the first region selected is given a priority of 1, the second region selected is given a priority of 2, etc.

3. To change a selected region's priority, click its associated **Priority** drop-down arrow and select a number.

4. To delete a selected region, click its associated 🗑 **Action** button.

5. To save the settings, click `Submit`.

    If all is okay, the **Settings** screen reloads and a success message appears.

   If there is an error, an error message appears. Correct the error and try again.
