

eConsult: Patient Consent Directives

When you create an eConsult case, the Patient's Health Information (PHI) includes the option to indicate if the patient has specific instructions about how their information is collected, used and disclosed. For example, if a patient has requested that their referral should not be sent to a specific specialist.

Creating a case

*Requester Smiley Robinson, Family / General Practice Medicine

*Model BASE Managed Specialty Specific Provider or Group

*Recipient Search for Specialist or Specialty Group...

Patient

*First Name Enter first name...

Middle Name Enter middle name...

*Last Name Enter last name...

*DOB YYYY-MM-DD

*Gender Male Female Other

*OHIP Enter patient OHIP number... Version code

Consent Directives

Please enter any consent limitations. Examples could include:
1. Do not forward this consult to *name of person | Organization*
2. Only send referral to *name of person | Organization*

*Request Enter history of present illness and other relevant data (such as the laboratory tests) to help the specialist provide a more meaningful consult...

Save as Draft Delete Draft Send

By default, the level of Patient Consent is set to allow full sharing of the patient's PHI.

If the patient wants to limit the sharing of their PHI, select the checkbox **Consent Directives*** and type the patient's request in the associated text field.

After you send the case, the Consent Directives cannot be changed and appear in read-only mode.
