

Content Sharing via Chrome

Use the Share button to share your screen with other participants in a videoconference.

Only one participant can share at a time. After the first participant shares their screen, subsequent shares must be negotiated verbally amongst the videoconference participants.

Note: For the best experience use Chrome v72+. If you use an earlier version (e.g., v61 - v71), you need to install a Chrome screen-sharing extension.)

1. To view the Share button, click the **More** button.
2. To start the share process, click the grey **Share** button.

A *Share your screen* pop-up appears that shows available screens and applications to share.

3. Select the content you want to share and click **Share**.

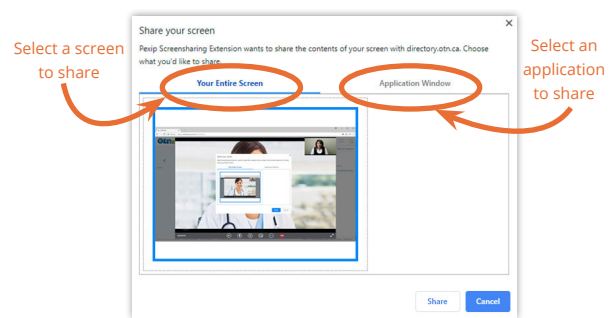

In your browser, the shared content appears in a small image at the top left of the video window.

For other participants, the shared screen replaces your image in their large video pane and your image appears as a thumbnail image in the top left corner. They can switch between the shared content and your image in the large video pane by clicking the **Expand** button or anywhere in the thumbnail image.

4. To expand the shared content thumbnail to appear in the larger video panel, click the **Expand** button or anywhere in the thumbnail image.
5. To stop sharing, click the white **Share** button in the video window toolbar.
