

# Prompts to Build Otn.teledermSF® Work Flow

## Instructions:

1. Use a highlighter and follow the flows down the left and right hand sides of the chart that best fit the needs of your clinic.
2. Once completed you should have a work flow that can be tweaked to meet the exact requirements of your clinic.

Note: If a physician plans to have input anywhere in the process and will want access to the Otn.teledermSF software, he/she should request access to the OTN training modules. Our processes are designed so that declining training will mean the physician does not receive a username and password.
